different hierarchal level than that stored at the server; and
providing a second indicator corresponding to the
hierarchal administrative level of the user corresponding to the
level of which the user has accessed the website.

11. (currently amended) A method for administration of a plurality of
websites, at least one of the plurality of websites being hosted at
a remote server comprising the steps of:

~~administering the at least one website~~ said plurality
of websites by accessing the at least one a respective website
at an address corresponding to a hierarchal administrative level;
obtaining login information from the user;
determining at the remote server the access rights
of the user based upon access rights information stored at the
remote server;
aggregating the rights of the user;
displaying enabling icons at the website
corresponding to said aggregated access rights for said user;
and
providing a graphical indicator at the website of said
hierarchal administrative level at which access is made to the
user.

12. (original) The method of claim 11, further comprising the step of
grouping all users with common access rights into a plurality of
respective groups and storing the groups at the server,
determining to which group the user belongs, and enabling the
access rights for the user based upon the rights granted to the
group to which the user belongs.
13. (previously presented) The method of claim 11, further
comprising the steps of determining a hierarchal level of the
user.

14. (previously presented) The method of claim 13, wherein the indicator indicates the hierarchal level corresponding to the address.
15. (canceled)
16. (previously presented) The method of claim 11, further comprising the steps of determining whether a user is authorized for access at the address corresponding to the predetermined access rights utilizing the access right information stored at the remote server and, if authorized, aggregating the rights of the user.
17. (original) The method of claim 16, further comprising the steps of:
 - grouping all users with common access rights in respective groups;
 - storing the respective groups at the server;
 - determining to which group the user belongs; and
 - aggregating the rights based upon the rights associated with the specific group to which the user is a member.
18. (original) The method of claim 11, further comprising the step of accessing the website at a public address, determining whether any access rights for a user accessing the website at the public address have been stored, and displaying no icons at said website for said user when no access rights have been stored at the server for said user.
19. (original) The method of claim 11, wherein said icons enable editing of material on the website.
20. (previously presented) The method of claim 11, further comprising the steps of:
 - determining a hierarchal level of the user as a function of the rights of the user.
